

Switches with a straight section in the branching direction

Tramway switches with a straight section in the branching direction are produced as right or left switches and can be used as facing or trailing switches. They are constructed for use in the most demanding conditions of tramway tracks. They guarantee a high degree of passage safety, quiet function, are ecologically harmless and feature a long lifetime with minimum demands for maintenance.

Securing:

- in cooperation with the facing or trailing direction setting system, automated or manual resetting of the turnout blades into the required direction and thus a safe tramway passage straight or in the branching direction
